SETTINGS

Sensitivity	20%, 50%, 75%, or 100%
-------------	------------------------

Controls the sensitivity of the sensor. 100% is maximum sensitivity.

Hold Time	10sec, 1min, 5min, 15min
-----------	--------------------------

Sets the amount of time that the luminaire remains at 100% full brightness after motion is no longer detected.

Daylight Sensor	Disabled, 1fc, 3fc, 5fc
-----------------	-------------------------

Controls the daylight sensor and ambient brightness threshold. If ambient brightness is lower than set threshold, the motion sensor is enabled and will turn the luminaire on when motion is detected. If ambient brightness exceeds the set threshold, the motion sensor is disabled and the luminaire will not turn on when motion is detected. If daylight sensor is disabled, then the sensor will control the luminaire output according to motion that is sensed in the detection area.

Stand-By Light Level	0%, 10%, 30%, 50%
----------------------	-------------------

Sets the low level or bi-level output of the luminaire when motion is no longer present in the detection area. 50% is default for OSBL specifications.

Stand-By Time	1min, 30min, 60min, Infinite
---------------	------------------------------

Sets the amount of time that the luminaire remains at Stand-By Light Level before it's switched off. Infinite means the luminaire doesn't turn off and will always remain at the Stand-By Light Level if no motion is sensed in the detection area.
